RUBELLA AND/or Measles

RUBELLA/Measles

Rubella (German Measles) is a viral disease that can cause serious health problems if not treated promptly. It is highly contagious and can be spread through coughing or sneezing. If you suspect you or someone you know has rubella, please seek medical attention immediately. The disease can cause lifelong disabilities and serious health problems. If you are pregnant, you should be vaccinated against rubella to prevent any complications to your health.

MEASLES

Measles is a highly contagious viral disease that can be spread through coughing or sneezing. It is easily transmitted and can cause serious health problems if not treated promptly. If you suspect you or someone you know has measles, please seek medical attention immediately. The disease can cause lifelong disabilities and serious health problems. If you are pregnant, you should be vaccinated against measles to prevent any complications to your health.

RUBELLA/Measles

Rubella and measles are both viral diseases that can cause serious health problems if not treated promptly. If you suspect you or someone you know has rubella or measles, please seek medical attention immediately. The disease can cause lifelong disabilities and serious health problems. If you are pregnant, you should be vaccinated against rubella or measles to prevent any complications to your health.

RUBELLA/Measles/CRS

Rubella, measles, and CRS (congenital rubella syndrome) are all viral diseases that can cause serious health problems if not treated promptly. If you suspect you or someone you know has rubella, measles, or CRS, please seek medical attention immediately. The disease can cause lifelong disabilities and serious health problems. If you are pregnant, you should be vaccinated against rubella, measles, or CRS to prevent any complications to your health.
